# How We Work?

## 01. Project Development Workflow

After the approval is received from the client, we commence with the following :

07. UI/UX Design.

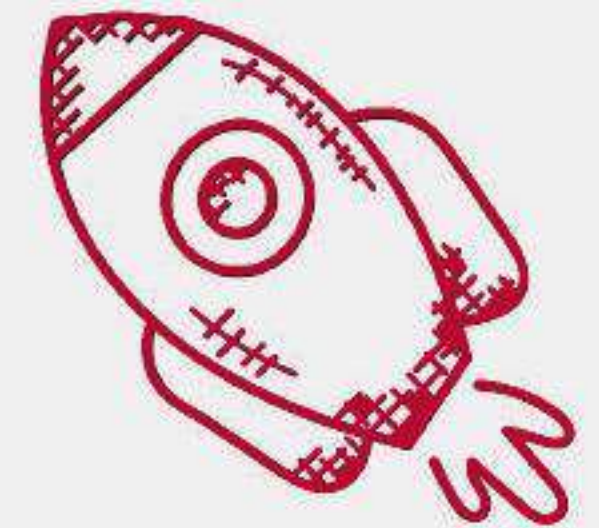

08. Technical Architecture.

09. Development - Front end, Back end and API.

10. Testing.

11. UAT (User Acceptance Test) Server deployment.

Live deployment will commence after the client approval.

## 02. Support Team Workflow

We have an energetic support team to handle the queries and requests raised. We pay close attention to the software needs even after the project is handed over to the customers. We provide Annual Maintenance Support and every member of our support team is provided with an individual email id and contact number to rectify any software issues raised.

 **01** Our support team will track your requirements with the ticketing software.

 **02** With ticketing software, we will keep track of client requests at any time.

 **03** Once the client has filled in the issue, we use the Service Level Agreement (SLA) regulation in the ticketing software. There are three SLA process severity levels.

Severity Level 1

Resolution within 4 hours.

Severity Level 2

Resolution within 24 hours.

Severity Level 3

Resolution within 48 hours.

# Our Engagement Model

## Project Based Development

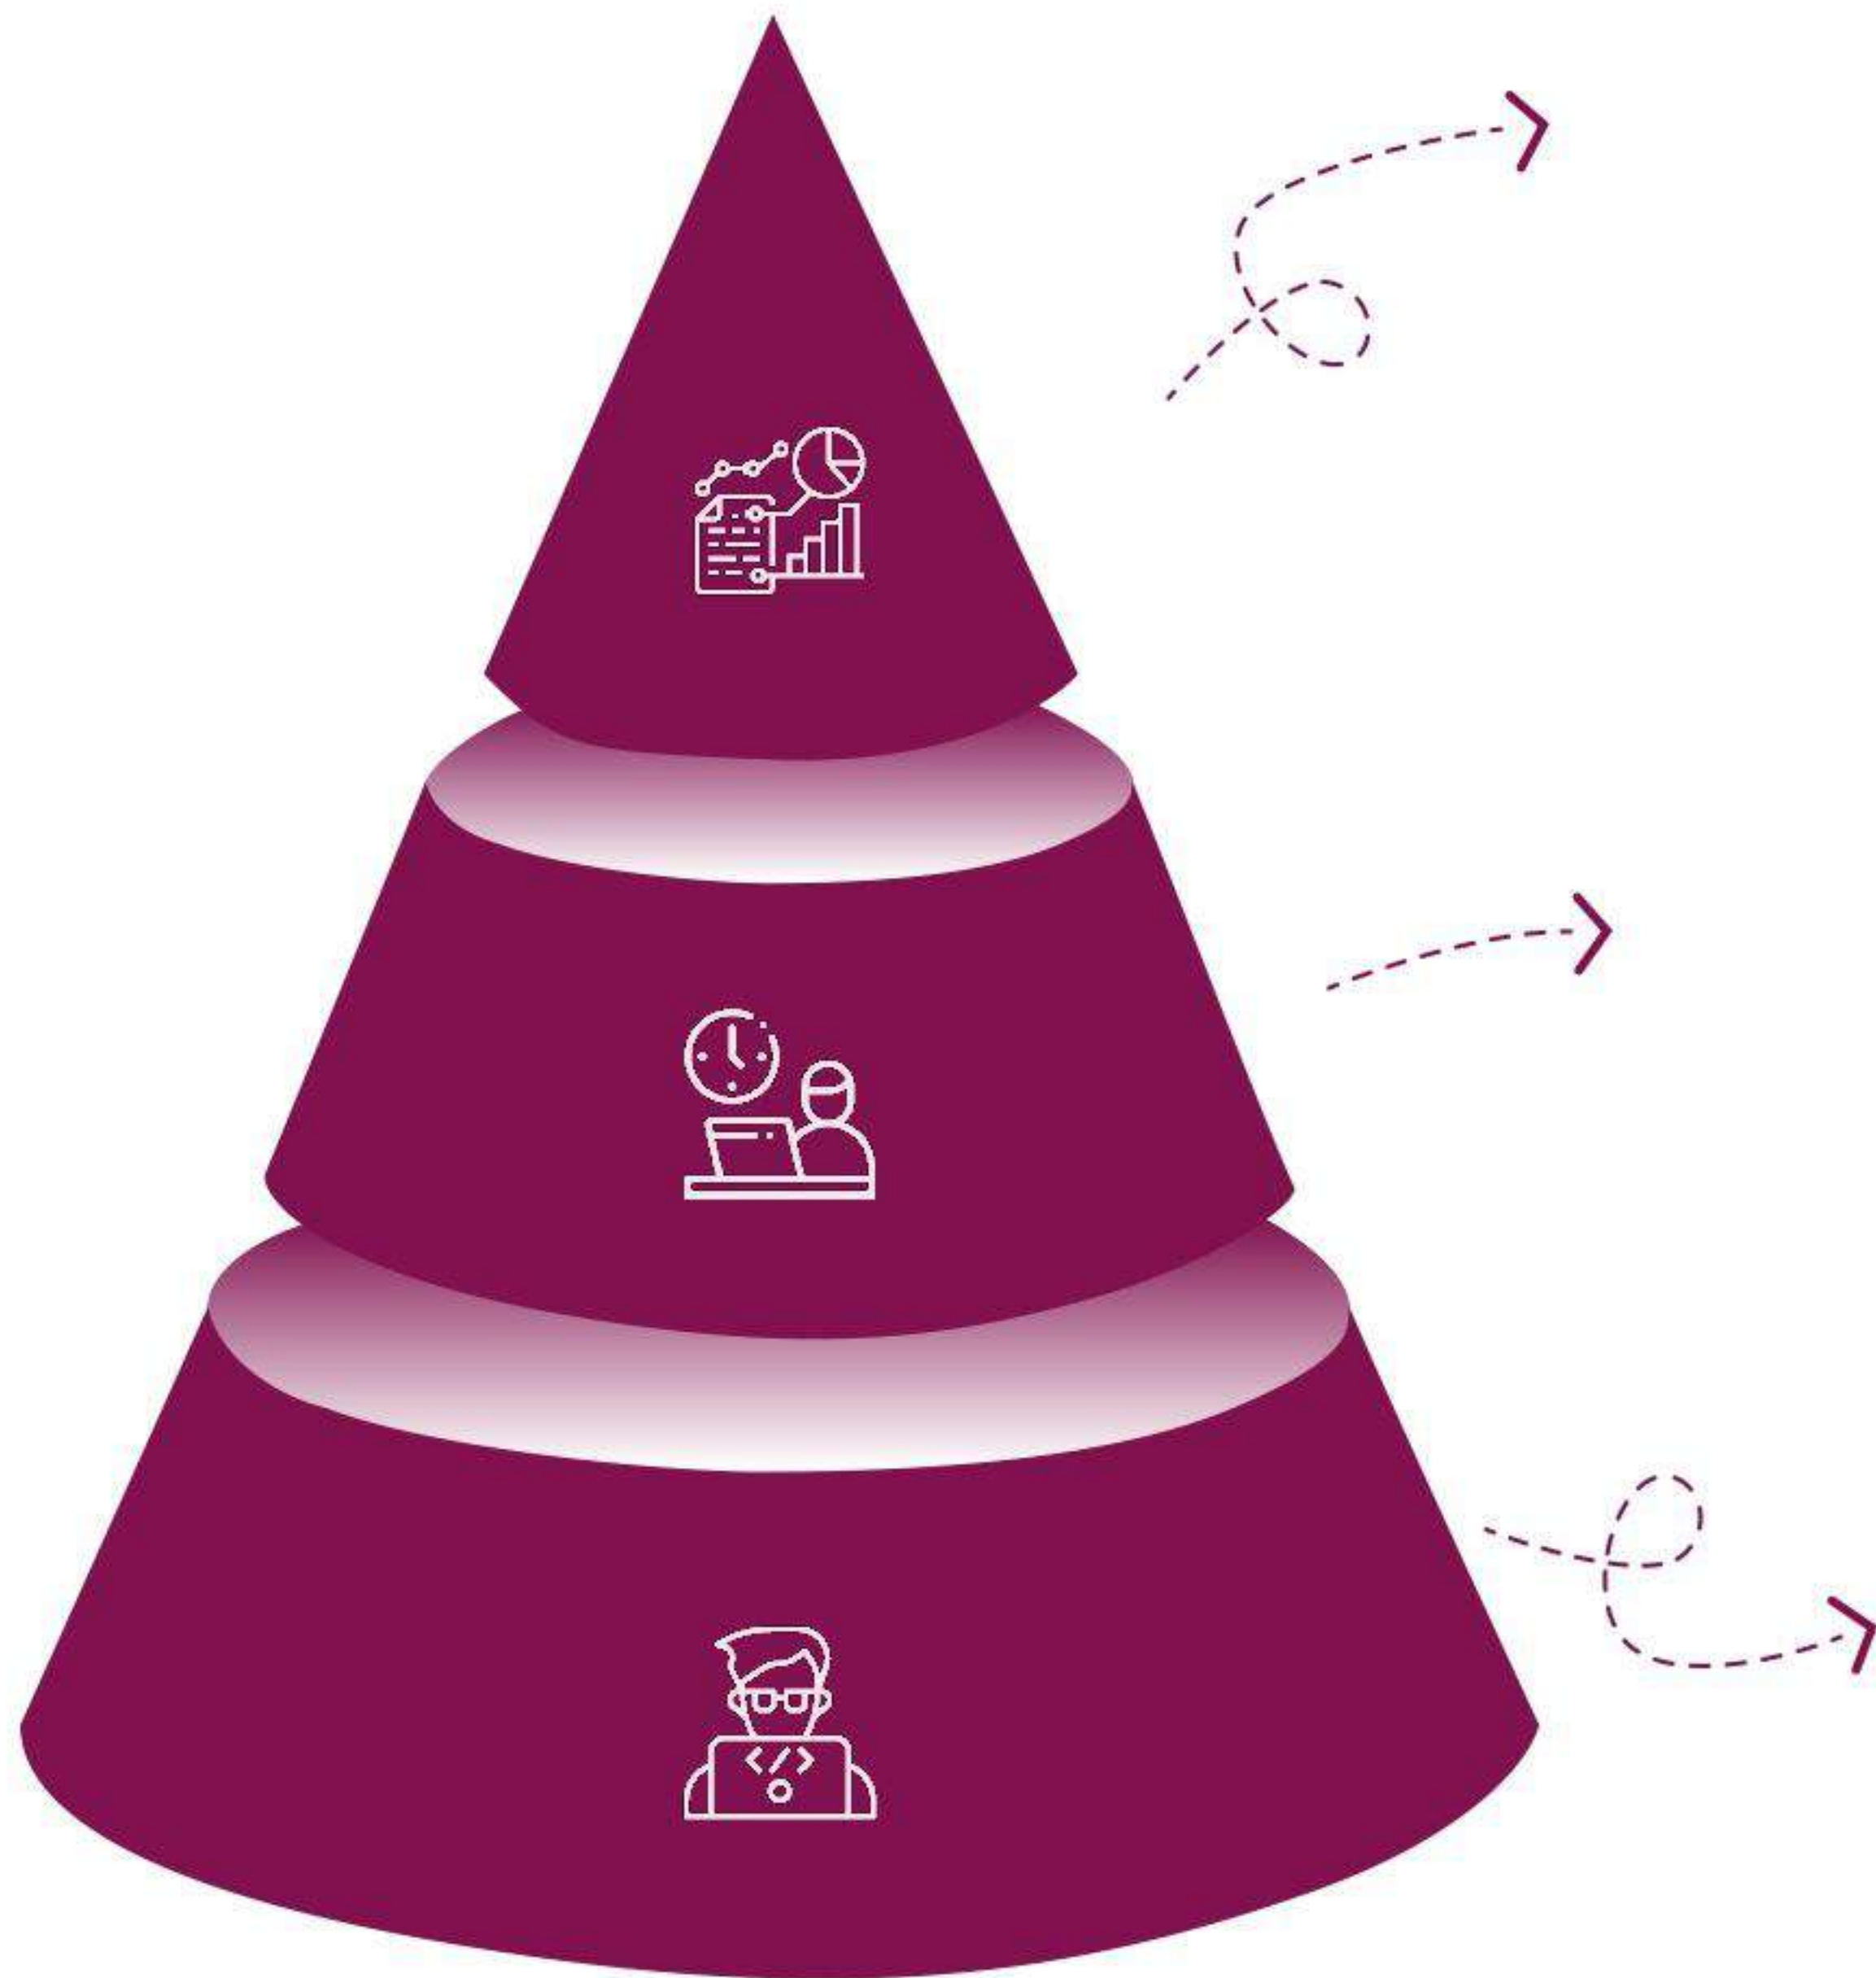

For the project phase, a price is fixed for the software development and models of agile and water flow are used. A project based covenant includes business analysis, technical documentation, prototyping design, software development, testing and a dossier of the projects.

## Hourly Based Development

We assign our dedicated developers having relevant technical expertise based on the client's priority. We offer the best resource for the project with extended support for Hour Based Development.

## Developer Based Development

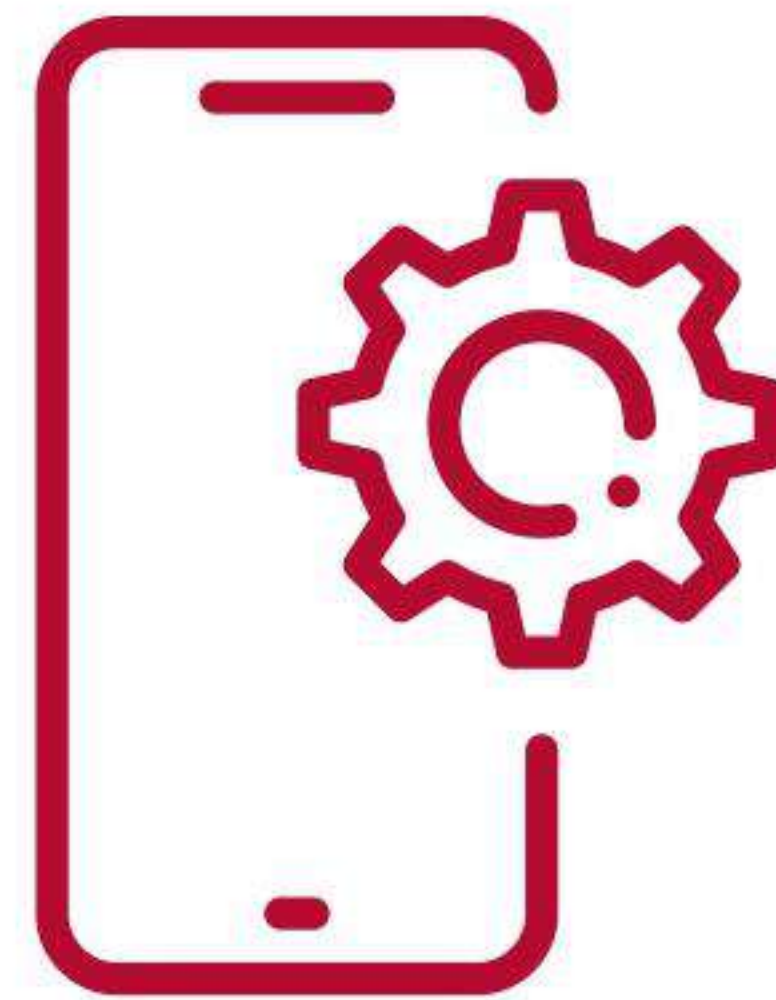

The clients can utilize an individual or a team from our developer team based on their requirements. Our developers blend in flawlessly with your in-house team. A minimum price per month is fixed for every individual developer.

# Technology

## Mobile App Development

Using the best mobile interface and ensuring it seems good with a superior experience.
